

SPECIAL SESSION

U.S. Grains Council Aquafeed production, perspective and sustainability

Explore the future of aquafeed with our comprehensive workshop where U.S. corn and corn co-products are at the heart of advancing aquafeed sustainability. This session will offer a detailed examination of global grains' supply trends and their impact on aquafeed demand. Gain insights into effective feeding practices and participate in a simulation for formulating aquafeed with Distiller's dried grains with Solubles (DDGS). We'll also cover key sustainability standards and certifications and hear from a panel of industry experts from Egypt, Tunisia, and across Africa on regional practices and challenges. Connect with experts, gain actionable insights, and be at the forefront of the next wave in aquafeed innovation and sustainability.

Who Should Attend?

This session is essential for aquaculture professionals, feed manufacturers, sustainability advocates, and anyone interested in the future of aquafeed. Gain valuable knowledge, network with experts, and discover how U.S. corn and its co-products can play a pivotal role in sustainable aquaculture.

Chair: Mohamed Salah Bouthour, msbouthour@grains.org
